A CONNECTED APPROACH TO FPSO PLANNING

Practical planning. Connected learning.

Connect maintenance planning, CMMS data, Operations interfaces, breakdown readiness and shutdown execution through practical FPSO scenarios.

For: maintenance planners, maintenance and reliability engineers, Operations engineers, supervisors and professionals preparing for FPSO planning responsibilities.

Try the free 7-day demo

Individual registration required.
Explore a sample lesson before enrolment.

One programme. Five connected modules.

01

Maintenance Planning Framework

Connect demand, work selection, planning packages and the ready-to-schedule gate.

02

CMMS Setup & Data Foundation

Build the asset hierarchy, job plans, maintenance records and information needed for execution.

03

Integrated Maintenance & Operations Planning

Align resources, materials, logistics, operating windows, PTW and SIMOPS.

04

Major Equipment Breakdown Readiness

Prepare failure scenarios, repair packages and logistics before critical equipment fails.

05

Planned Shutdown Planning & Execution

Develop scope, readiness and schedules; control execution, completion and return to service.

WATCH / REVIEW / EXERCISE / CHECK

Video lessons, presentations and learner guides, 52 practical exercises and 52 knowledge checks with 208 questions.

Certificate of Completion: complete all required steps and pass each knowledge check with at least 75%. Personalised PDF with an authenticity verification link.

CMMS Simulator demonstrations

Practise maintenance information, work orders, job preparation and scheduling. A dedicated testing and assessment module supports training exercises and learning checks. Request a guided demonstration for your team.
